Core aeration can be completed during September, October and early November. Over seeding of the lawn must be completed by no later than October 15th (weather permitting) to allow for seed germination. We recommend aerating your lawn once a year, or at least every other year, along with over seeding. Aeration only (no over seeding) can also be provided per your request. Aeration is a mechanical procedure that pulls 2"-3" plugs throughout the entire lawn. Fall is the best time so the seed has enough time to germinate and have a strong root system started before the next season. Nature's Way is not responsible for marking sprinkler systems, invisible fences and/or in-ground utility lines. You will need to notify the appropriate companies to have your lawn marked. If unsure of the depth of the cable television wires contact your cable company to flag the lines. All systems must be flagged before your lawn can be aerated.
